Riverside Family Clinic — Visit Summary

CONFIDENTIAL MEDICAL RECORD. Prepared for the patient's personal records. This summary covers the office visit on 12 March 2025 and the care plan agreed at that visit.

Patient details

Patient: Jordan Lee
Date of birth: 14 March 1988
Medical record number: RFC-204817
Attending physician: Dr. Priya Natarajan, MD (Internal Medicine)
Visit type: Annual physical with follow-up on blood pressure

Allergies

Jordan Lee has a documented allergy to penicillin. The reaction recorded in 2016 was hives and facial swelling within two hours of a first dose of amoxicillin. Penicillin-class antibiotics must be avoided; cephalosporins were tolerated in 2021 without incident. There are no known food allergies and no latex sensitivity.

Current medications

Lisinopril 10 mg, one tablet by mouth every morning, for hypertension. Started in September 2024.

Atorvastatin 20 mg, one tablet at bedtime, for elevated LDL cholesterol. Started in January 2025.

Cetirizine 10 mg as needed for seasonal allergies. The patient reports using it roughly twice a week between April and June.

Vital signs at this visit

Blood pressure was 128/82 mmHg, down from 142/91 mmHg at the September 2024 visit. Heart rate was 68 beats per minute and regular. Weight was 81.4 kg, a decrease of 2.6 kg since September. Height 178 cm. Body mass index 25.7. Temperature 36.7 °C. Oxygen saturation 98% on room air.

Laboratory results (drawn 5 March 2025)

Total cholesterol 182 mg/dL. LDL cholesterol 104 mg/dL, improved from 151 mg/dL before atorvastatin. HDL cholesterol 52 mg/dL. Triglycerides 131 mg/dL. Fasting glucose 94 mg/dL. HbA1c 5.4%. Creatinine 0.9 mg/dL with an estimated GFR above 90. Potassium 4.2 mmol/L. Liver enzymes within normal limits.

Assessment

Hypertension is now controlled on lisinopril with lifestyle changes; the goal remains below 130/80. Hyperlipidemia is responding well to atorvastatin and the LDL target of under 100 mg/dL is nearly met. Seasonal allergic rhinitis is adequately managed with cetirizine. Overall the patient is in good health with improving cardiovascular risk markers.

Plan

Continue lisinopril 10 mg daily and atorvastatin 20 mg nightly with no dose changes. Repeat the lipid panel and a basic metabolic panel in six months. Maintain at least 150 minutes of moderate exercise per week and continue the reduced-sodium diet discussed in September. A flu vaccine was administered at this visit in the left deltoid, lot number FL24-0931. The tetanus booster is due in 2027.

Follow-up

Next appointment: 16 September 2025 at 9:30 AM with Dr. Natarajan for a six-month blood pressure and lipid review. Patients should bring a list of all current medications. Contact the clinic at (555) 014-2200 if blood pressure readings at home exceed 140/90 on two consecutive days.

Emergency contact on file: Casey Lee (sibling), (555) 014-7781.
